Eastern Atlantic States Regional Council of Carpenters

Heavy Highway & Infrastucture Carpenters

Building Our Nation's Infrastructure

Where Skillset, Flexibility, Equity & Productivity Meet The Road

A team of specialized union carpenters accompanies virtually every highway or heavy construction job. This includes:

- Bridges & Tunnels
- Elevated Roadways
- Railways
- Ports of Entry
- Energy
- Water & Sewer

Training: What Separates Us From The Competition

With union carpenters and contractors on the job, governing bodies are investing in their training, giving them the reassurance they are hiring the best workforce available. Training ranges from work site safety to OSHA, which includes:

- Basic Carpentry Skills
- Concrete Gang Form Courses
- OSHA 30
- Welding Courses
- Fork Lift Operator
- Aerial Lift Operator
- Complete site layout courses from builders level to Robotic Total Stations
- Rough Terrain Vehicles
- Construction Fall Protection
- Rigging and Hand Signaling Certification

Highway and heavy construction carpenters are a special class of skilled workforce because of the sheer magnitude of the projects that they confront. In addition to the technical proficiency required, they also bring patience, vision and flexibility to each construction project.

These projects can take years to complete, and an orderly approach to the job is important.
